

EMAN PEPARS

Flutter Developer • Cross-Platform Mobile Engineer

Dubai, UAE | emanpepars2@gmail.com | +971 58 556 2001 | [Portfolio \(Live Apps\)](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Flutter Developer with **4+ years of production experience** and **13+ live applications** shipped to the App Store and Google Play across the GCC, MENA, US, and European markets. Specialised in cross-platform delivery for **e-commerce, real estate, healthcare, and live auction marketplaces**. Owns the full delivery lifecycle - from architecture and feature development through release and post-launch maintenance. Deep expertise in **Clean Architecture (BLoC/Cubit)**, **real-time systems (Socket.IO)**, and **fintech integrations** including Apple Pay, BNPL providers (Tabby, Tamara), and **UAE PASS** digital identity. Proven track record building production apps with full **Arabic/English RTL support** and **scalable multi-flavor architectures** that power multiple branded storefronts from a single codebase.

CORE SKILLS

Flutter & Dart: Cross-platform development for Android, iOS, and Web

State Management: BLoC, Cubit, Riverpod, Provider, GetX (routing)

Payments & Integrations: Apple Pay, Google Pay, Tabby, Tamara, UAE PASS, Appsflyer

Storage & Security: Hive, SharedPreferences, Secure Storage

Navigation & Linking: Deep Links, Dynamic Links

DevOps & Tooling: Git, GitHub, GitLab, CI/CD, App Store & Google Play release management, Flutter flavors (Flavorizr), code generation (build_runner, json_serializable)

Architecture: Clean Architecture (Presentation, Domain, Data), MVVM, SOLID, design patterns, DI (GetIt)

API & Real-time: REST APIs (Dio, Retrofit), WebSockets (Socket.IO)

Firebase: FCM, Analytics, Crashlytics, Remote Config, Firestore, Realtime Database

UI & Performance: Responsive design (ScreenUtil, LayoutBuilder), full RTL support, Lottie animations

Hardware & Device APIs: Barcode scanning, camera, geolocation, push notifications

Languages: Arabic (Native), English (Professional)

PROFESSIONAL EXPERIENCE

Flutter Developer - Full-time

Soldout KSA • Riyadh, Saudi Arabia Dec 2025 – Present | Remote (Dubai)

Build and maintain two production Flutter applications powering a KSA marketplace that combines traditional e-commerce with **live auction functionality**, covering both vendor and customer experiences. Both apps live on App Store and Google Play.

Soldout - Customer App (Marketplace + Live Auctions)

Tech: Flutter, Dart, BLoC/Cubit, Dio, Firebase (full suite), Socket.IO, Apple Pay, Tabby, Tamara, Appsflyer, easy_localization

Architect and maintain a real-time **auction engine** handling live bidding, time-based winning logic, and post-auction checkout.

Integrate **Apple Pay, Tabby, and Tamara** to deliver a GCC-native checkout experience that supports installment-based purchasing flows expected by KSA buyers.

Wire up Firebase Analytics, Remote Config, Firestore, Realtime Database, and Appsflyer to power product attribution, feature flagging, and behavioural insights.

Build a **promotional coins and wallet system** with referral tracking and full transaction history, alongside complete Arabic/English RTL localization across every screen.

Soldout - Vendor App

Develop merchant-facing features including order tracking, product management, wallet and transaction history, and analytics dashboards, structured on Clean Architecture with strict Presentation / Domain / Data separation.

Build a **type-safe API layer** leveraging Dio, Retrofit, and JSON code generation to eliminate boilerplate and reduce runtime errors.

Integrate Firebase Cloud Messaging, Dynamic Links, and local notifications to power reliable merchant communication flows.

Flutter Developer - Full-time

NTG Clarity • Cairo, Egypt Jul 2024 – Nov 2025

Contributed to a **dual-app e-commerce ecosystem** (vendor + customer) with sole ownership of a multi-flavor architecture supporting multiple branded storefronts from a single Flutter codebase. Both apps live on App Store and Google Play.

Markatty Store - Customer App

Architected a multi-flavor setup using Flavorizr with isolated Firebase configurations, app icons, splash screens, and environment variables per brand - eliminating the need for duplicate codebases and dramatically simplifying the brand-onboarding workflow.

Implemented a **hybrid state management strategy** - BLoC for core e-commerce flows, Provider for lighter form and notification modules - and integrated Firebase Messaging, Analytics, Crashlytics, and Remote Config across all flavors.

Markatty - Vendor App

Built order management, authentication, and analytics views on Clean Architecture with BLoC/Cubit, integrated rich media handling, location services (geolocator, geocoding), and secure storage for sensitive merchant data.

Flutter Developer - Full-time

GS For Applications • Cairo, Egypt Dec 2023 – Jun 2024

Owned full-lifecycle development across **multiple production Flutter apps**, leading architecture decisions, API integration, and cross-platform releases.

Beneshty (E-commerce) - Drove development of a customer-facing e-commerce app that has reached **100,000+ Google Play installs**, contributing to architecture, core shopping flows, and release management on both App Store and Google Play.

Zebra (Barcode Scanning & Inventory Management) - Built a mobile inventory system using **device barcode scanning** to track items across warehouses, verify stock presence, and manage transfers between inventories - solving real operational visibility problems for multi-warehouse logistics.

La Jolie (Cosmetics E-commerce) - Built a **modular UI component library** and theming system, alongside product browsing, cart, and authentication flows powered by Firebase notifications and GetIt dependency injection - reframing brand customisation as a config problem rather than a code problem.

Delivered consistent Clean Architecture + Cubit conventions across the portfolio, ensuring long-term maintainability and rapid feature iteration across all apps.

Flutter Developer - Remote

Revealsite • United States Oct 2022 – Nov 2023 (while completing CS degree)

Developed and maintained **four production healthcare applications** serving the US and European markets - **J&D Pharmacy, Medical Compounding Pharmacy, Quick RX, and Holland Pharmacy** - covering medicine ordering, prescription management, and secure authentication.

Maintained stability and compliance across Android and iOS in a **regulated healthcare context**, managed the complete app lifecycle including testing, debugging, and release management on both App Store and Google Play.

KEY PROJECTS

AIMARWAN - Property & Real Estate Management Platform

Domain: UAE real estate and property investment • Platforms: Android, iOS • (Live on App Store)

Tech: Flutter, Dart, Clean Architecture, BLoC/Cubit, Dio, Retrofit, Socket.IO, GetIt, easy_localization, ScreenUtil, Secure Storage

Built a comprehensive property management platform covering **owned units, payment management, cheque workflows, invoice and receipt tracking, and document management** tailored for UAE-based property investors.

Integrated **UAE PASS** for government-backed digital identity authentication and **Socket.IO** for real-time payment status and property state updates, delivered seamlessly across Android and iOS from a single codebase.

La Mode - Fashion E-commerce App

Domain: Fashion retail - clothing, footwear, and accessories • (Open-source / personal project)

Tech: Flutter, Dart, Clean Architecture, BLoC, Provider, Dio, Hive, Firebase Messaging, model_viewer_plus, ScreenUtil, easy_localization

Designed and built a complete fashion shopping experience from scratch, including an **interactive 3D product viewer** spanning the full user journey from onboarding and OTP authentication through cart, checkout, orders, and promo codes, with full Arabic/English RTL support throughout.

MetaPharaoh - Ancient Egypt VR App (Graduation Project - featured in national press)

Domain: Educational technology / immersive learning • Platform: Oculus Quest 2 (VR)

Tech: Unity, Blender, Sketchfab, Flutter, Google Maps API, OpenAI API

Built an immersive VR application enabling users to explore ancient Egypt through **interactive environments, 3D reconstructions, and guided experiences** on Oculus Quest 2.

Developed gamified learning flows with quests, multilingual support, and offline access, integrated Google Maps for location context and an **OpenAI-powered chatbot** for interactive educational insights.

EDUCATION

Bachelor of Science in Computer Science & Artificial Intelligence (GPA: 3.0 / 4.0)

Helwan University • Cairo, Egypt 2019 – 2023
